5.8 GHz Parabolic Antenna

29 dBi

Superior Performance

The Hyper Gain 5.8GHz High-Performance Parabolic Dish Wi-Fi Antennas is a high performance broadband dual polarized solid dish antenna designed to operate from 5.1 GHz to 5.8 GHz (5150-5850 MHz). The wide band design of this antenna eliminates the need to purchase different antennas for each frequency. This simplifies installations since the same antenna can be used for a wide array of wireless applications. This antenna features 29 dBi of gain with a 5° beam-width.

Rugged and Weatherproof

The reflector dish of these antennas are constructed from high quality aluminum which gives them superior strength. The dish is coated in a light gray UV-inhibited polymer for durability and aesthetics. The small diameter of the dish helps minimize wind loading.
